Sequence 33, Application US/08974180

Patent No. 602519.

Patent No. 602519.

TILLE OF INVENTION: Methods for Modulating and Identifying TITLE OF INVENTION: Callular Senescence

TITLE OF INVENTION: Callular Senescence

TITLE OF INVENTION: Callular Senescence

NUMBER OF SEQUENCES: 36

CORRESPONDERCE: 36

CORRESPONDERCE: Geron Corporation

STREET: 230 Constitution Drive

CITY: Menlo Park

STATE: Galifornia

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5.8%; Score 26; DB 1; Length 26; ilarity 100.0%; Pred. No. 40; Conservative 0; Mismatches 0; Indels

Sequence 4, Application US/09633573

Patent No. 6607898

GENERAL INFORMATION:
APPLICANT: Kopreski, Michael S.
APPLICANT: Gocke, Christopher D.
TITLE OF INVENTION: Telomerase-associated RNA in Plasma or Serum
FILE REFERENCE: 00-1328

CURRENT APPLICATION NUMBER: US/09/653,573

CURRENT FILING DATE: 2000-08-31

PRIOR FILING DATE: 2000-08-31

PRIOR FILING DATE: 2000-08-31

NUMBER OF SEQ ID NOS: 7

SEQ ID NO 4

LENGTH: 26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APPLICANT: Kopreski, Michael S.

Sequence 26, Application US/08630019A

Patent No. 6015710

GENERAL INFORMATION:
APPLICANT: Wright, Woodring E.
APPLICANT: Piatyszek, Mieczyslaw A.
APPLICANT: Orey, David
APPLICANT: No. 6015710ton, James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by
TITLE OF INVENTION: Peptide Nucleic Acids
NUMBER OF SEQUENCES:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 26;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 25, Application US/08838545

Patent No. 6046307

GENERAL INFORMATION:
APPLICANT: Wright, Woodring E.
APPLICANT: Piatyszek, Mieczyslaw A.
APPLICANT: Corey, David R.
APPLICANT: No. 6046307, Con. James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by
TITLE OF INVENTION: Peptide Nucleic Acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER IS Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/770,565
FLING DATE: 20-DEC-1996
CLASSIFICATION: 435
ATTORNEY AGENT INFORMATION:
NAME: Storella, John R.

REGISTRATION NUMBER: 12,944

REFERENCE/DOCKET NUMBER: 015389-001610US

TELEPHONE: (415) 576-0200

TELEPHONE: (415) 576-0200

TELEPAX: (415) 576-0300

INFORMATION FOR SEQ ID NO: 25:
SEQUENCE CHARACTERISTICS:
LENGTH: 24 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: other nucleic acid
SECRIPTION: (desc. "peptide nucleic acid (FNA), DESCRIPTION: where (decxy(ribose-phosphace linkages are replaced by DESCRIPTION: Qestallary) glycine units linked to nucleotide bases via
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: Silverman, Robert H.

Sequence 32, Application US/08482115B
Patent No. 576679
GENERAL INFORMATION:
APPLICANT: Villeponteau, Bryant
APPLICANT: Feng, Juni
TAPLICANT: Feng, Juni
APPLICANT: Andrews, William H.
TITLE OF INVENTION: Assays for the RNA Component of Human
TITLE OF INVENTION: Telomerase
NUMBER OF SEQUENCES: 40
CORRESPONDENCE ADDRESS: 40
CORRESPONDENCE ADDRESS: 40
CORRESPONDENCE ADDRESS:

MOLECULE TYPE: other nucleic acid
DESCRIPTION: /desc = "peptide nucleic acid (PNA),
DESCRIPTION: where (deoxy(ribose-phosphate linkages are replaced by
DESCRIPTION: N-(2-aminoethyl)glycine units linked to nucleotide bases via
DESCRIPTION: glycine amino N through a methylenecarbonyl linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GENERAL INFORMATION:
